Photo Caption: South Jersey Gas Introduces 100th Compressed Natural Gas Fueled Vehicle to Fleet

MILLVILLE, NJ, May 19, 2016 – South Jersey Gas recently celebrated a company milestone, introducing the 100th compressed natural gas (CNG) fueled vehicle into its fleet. Jeffrey DuBois, president of South Jersey Gas, and members of the South Jersey Gas CNG team gathered for a photo at the company’s Millville divisional office and public CNG fueling station. CNG, reliable and cost-effective, is the cleaner alternative to traditional gasoline.

South Jersey Gas is committed to expanding CNG fueling sites across southern New Jersey, with seven public fueling stations open now and plans to construct more this year. Furthermore, the utility has already converted more than 100 of its vehicles to CNG since 2011, and is committed to converting its entire fleet by 2020. Once the entire fleet is converted, the use of approximately 457,000 gallons of gasoline per year will be eliminated.
